

Application No.: 10/637,888

Title: INDUSTRIAL TANK SUPPORT

Amendment Responsive to Office Action of September 13, 2005

**Amendments to the Specification:**

Please amend the specification to replace the paragraph beginning on page 7, line 13 with the following amended paragraph:

Also, the present invention provides for further modification of an initially rotationally molded tank support 10 or 10A. For example, transverse slots 34 may be cut or molded into the legs 12 adjacent one or both of the top end and the bottom end, whereby strap 36 may be routed through the slots 34 to help hold and stabilize the tank 16. Additionally, a stand 66 72 may be coupled to the legs 12 as illustrated in Fig. 1. The stand 66 72 may be coupled using mounting bands 68 74 which are held by bolts 70 76 or other threaded fasteners extending into the legs 12. The stand may be used, for example, to mount a stirrer 72 78 over the tank 16 whereby the liquid contents of the tank may be agitated to a homogeneous mixture for dispensing therefrom.
